

MARKET UPDATE **SERIES**

Climax Rigid Couplings provide more power than Flexible Couplings...

Do you need a simple, cost effective solution to couple two rotating members, such as in-line shafts, together?

Need to connect a motor to a gearbox?

Do you have a precision motion control application?

Climax Rigid Couplings can do the job! Climax's simple, rugged design allows the joining of two aligned shafts and are capable of transmitting more power than flexible couplings for high horsepower applications with zero backlash. Our couplings secure onto two rotating shafts and provide the transmission of torque and motion.

Available in:

- Set Screw, One-piece & Two-piece styles
- With or Without Keyway
- English & Metric bores
- From stock 1/4" ID through 2 1/4" ID
- Steel, Stainless Steel & Aluminum

Machinable mini-bore Two-piece styles in Steel & Stainless Steel
Special custom sizes quoted on application.
Precision machined and available to you.

**Contact Climax for more information on our
complete line of Shaft Collars & Rigid Couplings.**
